

QUALITY POLICY

Sabre Instrument Valves Limited is committed to the design and manufacture of quality valve products to satisfy all the statutory and customer requirements as applicable to the oil and gas industry.

In order to meet this objective the organisation has developed and implemented a Management System (MS) that provides the necessary controls and guidance needed and that will meet or exceed the requirements of the international standards ISO 9001 and 2014/68/EU Module H of the Pressure Equipment Directive (PED).

The MS will be subject to regular review and improvement where necessary, to ensure that it continues to satisfy the strategic direction of the organisation and the needs of all interested parties. All personnel are expected to work in accordance with the requirements of the MS.

Top management will invest their time and effort in communicating the requirements of the MS to the workforce, ensuring that they understand the company's strategy and their contribution towards achieving published business objectives. Objectives and Targets will be documented and associated action plans will assign responsibilities, resources and timescales as appropriate.

The intention will always be to produce our products right first time, every time and the entire workforce is empowered and enabled to propose changes to the MS and working practices. The MS will provide the necessary processes for reviewing and implementing any such changes.

Where there is a need to train and develop personnel, so that they can work in accordance with the MS, it is the responsibility of line management to identify and satisfy those needs.

Signed

S R Buckley – Group Chairman
